

MACs buy from the same aisles every month — habit, not awareness, is the growth leak

- Swiggy Instamart · Growth PM case
- AI discovery engine + validated research + deployed Basket-Gap Agent

North-star: raise % of MACs who buy ≥ 1 new category each month

- Examples: groceries $\rightarrow$ pet · snacks $\rightarrow$ personal care · household $\rightarrow$ baby
- Behavior today is replenishment-first: same search queries, same SKUs
- Winning unlocks adjacency without breaking the 10-minute job

AI engine: reorder habit + search tunnel + first-buy risk dominate

- Corpus: Play Store + App Store + Reddit (10k+ items scraped)
- Themes: habit autopilot, search-first nav, quality anxiety, time pressure
- Discovery today = typed search & past orders, not category browse
- Every insight carries quote IDs; scorecard on /workflow

How the review-analysis workflow works (testable live)

- 1 Ingest → Play/App/Reddit scrapers to JSONL
- 2 Normalize → dedupe, language, substance filter
- 3 Classify → Groq gpt-oss blockers & segments
- 4 Theme → cluster with evidence IDs
- 5 Validate → gold set, kappa, triangulation, citations
- Live link: </workflow>

6 interviews validate habit & risk — and challenge “price is #1”

- Segment: replenishment users who buy pet/baby/care/pharmacy elsewhere
- Validated: autopilot, search tunnel, first-purchase risk
- Challenged: price as primary adjacency blocker; trust/size/replace win
- Artefact: /research/research-pack.md

Problem: first buys in new categories feel costly under a kitchen-only habit loop

- Root cause: search-led habits + first-purchase risk + mental model silo
- Workarounds: Blinkit/Zepto, chemist, pet store, supermarket care aisle
- User value: fewer app/store switches with trusted starter baskets
- Business value: ↑ new-category MAC rate, AOV, retention

MVP: Basket-Gap Agent — trigger-timed, de-risked 3-SKU first baskets

- Infer household from reorder graph
- Detect categories bought elsewhere
- 3 SKUs with reason + price anchor + risk reversal
- Time to a trigger — not a generic carousel

Production MVP: pick a persona, see the gap, chat the agent, add a trial SKU

- Personas: Pet parent · Snack repeater · Family/toddler · WFH cook
- Instamart-styled mobile UI + Groq chat with cache fallback
- Live link: </agent>

Success metric: new-category MAC rate — leading indicators on trial & repeat

- Primary: % MACs with ≥ 1 new-to-them category in 30 days
- Leading: shortlist CTR · ATC · first-order completion
- Guardrail: replenishment conversion & ETA satisfaction
- Rollout: pet + baby cohorts first

Deliverables: workflow, research pack, and deployed agent

- Workflow: /workflow
- Agent MVP: /agent
- Research pack: /research/research-pack.md
- Stack: Next.js · Groq openai/gpt-oss-120b · Vercel
